Summary: House Prices

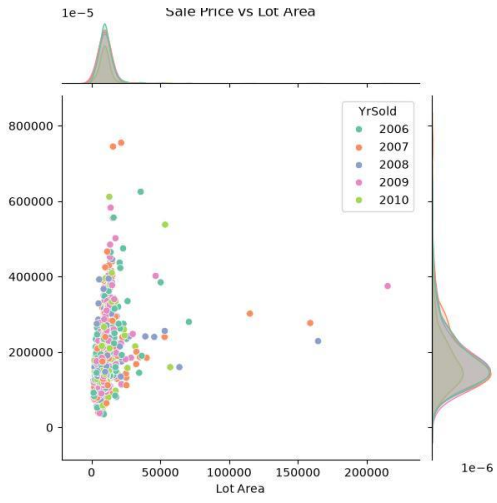

Salvador Priego Rosales ID:100460147

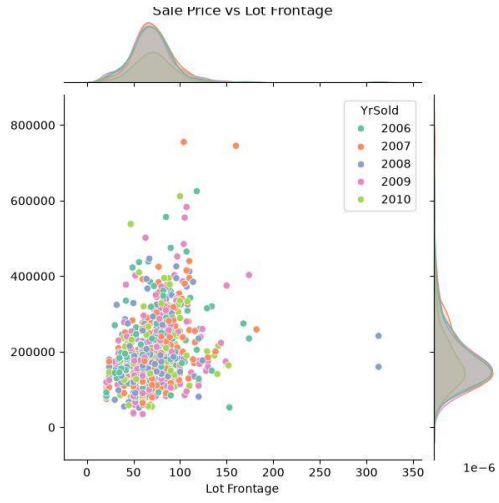

Conclusions

In this dataset, I evaluated 7 distinct categories; none showed a significant difference in price, though it is worth noting that there are major outliers with high prices in the year 2007. The category that exhibited the greatest price difference compared to the others was the "Zoning Class" variable, with the commercial zone (“C”) being the least expensive relative to the other zones.
